REPORT ON PEGA INFINITY STUDIO WORKSHOP

The Pega infinity studio workshop was conducted by Talentsprint on 28-09-2019. The 29 registered students of third years attended this workshop.

Fast track innovation and enhance productivity with an intuitive, low-code, role-based authoring experience that brings together business and IT. Use visual models and Agile methodology to build apps that are always up to date, easy to change, and ready to deploy where you need them. If you are completely new to Pega, the free trial is the fastest way to experience the simplicity and power of the Pega Platform.

The participants were explained about the case types and the demonstration of developing an app using Pega Infinity App studio was provided.

With Pega Infinity, we have New App Studio that allows one to build cases, data, and interfaces. We will get right into it and build out this new case type for our order return. Case types are the way that you manage work in Pega.

You want to drive towards a meaningful business outcome. In this case, we're going to build out this order return case.

Pega's App Studio is the only low-code solution that reconciles these silos and brings users together in one inclusive, intuitive authoring environment that serves all skill levels. Business users become active participants in the development process, reacting in real time to evolving business needs.

Developers, freed from legacy code maintenance, have the tools and time they need to focus on more complex, high-value tasks. And all work is done within organizational guardrails set by IT to protect against future upgrade and compliance issues.

The Hands On training given during the workshop created an awareness about Pega and its products among the students. The feedback about the workshop was Good.
